## PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special characteristics. These characteristics often pass unnoticed and the protection afforded by them cannot necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts that have these special safety characteristics are identified in this manual and its supplements. Electrical components having such features are identified by a  in the schematic diagram and the parts list.

Before replacing any of these components, read the parts list in this manual carefully. The use of substitute replacement parts that do not have the same safety characteristics as specified in the parts list may create shock, fire, or other hazards.

## SPECIFICATIONS

### AM SECTION

- All items are measured at tapeout terminals with 47 kohms terminated.
- The generator output shall terminate in an IRE loop.
- Standard Modulation: 400 Hz, 30% modulation.

	Measured at (kHz)	Unit	Nominal	Limit
Frequency Cover Range		kHz	520 – 1720	520 – 1720
Intermediate Frequency		kHz	450	—
20 dB Quieting Sensitivity	600 1000 1400	µV/m	447 335 335	891 708 708
S/N Ratio at 5 mV/m Input	1000	dB	38	30
Selectivity at S/N 20 dB Input, ± 10 kHz	1000	dB	28	20
Band Width at 6 dB down	1000	kHz	6	4.5 – 9
AGC Figure of Merit	1000	dB	45	35
IF Rejection Ratio	600	dB	50	30
Image Rejection Ratio	1400	dB	27	20
THD at 5 mV/m Input, 30% Modulation	1000	%	1.0	3.0
Overload Distortion at 100 mV/m Input, 80% Modulation	1000	%	4.5	8
Electrical Audio Fidelity Frequency Response = 1 kHz, -6 dB down, 5 mV/m Input	1000	Hz	50 – 2.5K	80 – 2.0K

		<b>Measured at (kHz)</b>	<b>Unit</b>	<b>Nominal</b>	<b>Limit</b>
Whistle Modulation					
(2nd)	at 1 mV/m	900	%	10	15
	at 100 mV/m	900	%	10	15
(3rd)	at 1 mV/m	1350	%	5	15
	at 100 mV/m	1350	%	5	15
Tapeout Level, 5 mV/m, at 1 kHz		1000	mV	165	165 ± 3.5 dB
Auto Search Stop Level		1000	µV/m	500	250 – 1500

**Note:** If the PLL synthesized receiver is for Europe and Australia, all of the above measurement points should be replaced to 603 kHz, 999 kHz and 1404 kHz.  
AM cover range is 531 kHz to 1710 kHz for Europe and Australia.

## FM SECTION

- All items are measured at tapeout terminals with 47 kohms terminated.
- The signal voltage in this specification is the voltage appearing across the 300 ohm input terminals.
- Standard Modulation : 1000 Hz, 75 kHz deviation.

		<b>Measured at (MHz)</b>	<b>Unit</b>	<b>Nominal</b>	<b>Limit</b>
Frequency Cover Range		MHz		87.5 – 107.9	87.5 – 107.9
Intermediate Frequency		MHz		10.7	—
IHF (Usable) Sensitivity					
	89.9	µV	2.5	8.0	
	89.9	dBf	13.2	23.3

	98.1	dBf	13.2	23.3	
	105.9	µV	2.5	8.0	
	105.9	dBf	13.2	23.3	
Limiting Sensitivity (-3 dB)	98.1	µV	1.7	5	
S/N Ratio at 1 mV Input, IHF A Filter	98.1	dB	65	55	
S/Hum Ratio	98.1	dB	62	52	
Spurious at 206.9 MHz	98.1	dB	70	60	

	<b>Measured at (MHz)</b>	<b>Unit</b>	<b>Nominal</b>	<b>Limit</b>
Electrical Audio Fidelity				
400 Hz = 0 dB, at 1 mV Input 100 Hz	98.1	dB	0	0 ± 3
10 kHz (US/CA)	98.1	dB	-13.65	-13.65 ± 3
10 kHz (EU/AU)	98.1	dB	-10.36	-10.36 ± 3
Distortion at 1 mV Input at 1000 Hz	98.1	%	0.35	1.5
Capture Ratio at Input 100 µV	98.1	dB	2.0	4.0
Alternate Channel Selectivity at Input 100 µV	98.1	dB	50	40
Image Response	105.9	dB	35	24
IF Rejection	89.9	dB	66	50
AM Suppression at 1 mV Input (FM 75 kHz DEV., AM 30% MOD.)	98.1	dB	58	40
Tapeout Level, at RCA, 75 kHz deviation 1 mV Input	98.1	mV	500	500 ± 3.0 dB
Maximum Signal Handling at 10% THD	98.1	µV	200K	100K
Auto Stop Sensitivity	98.1	µV	14.1	14.1 ± 6 dB

**Note:** If the PLL synthesized receiver is for Europe and Australia, all of the above measurement points should be replaced to 90.0, 98.0, and 106.0 MHz.

FM cover range is 87.5 MHz to 108 MHz for Europe and Australia.

## FM MPX SECTION

- All items are measured at tapeout terminals with 47 kohms terminated.
- The signal voltage in this specification is the voltage appearing across the tuner input terminals. (IHF)
- Standard Modulation: Main Carrier (L + R) ..... 33.75 kHz (45%) deviation  
Sub Carrier (L - R) ..... 33.75 kHz (45%) deviation  
Pilot ..... 6 kHz (8%) deviation  
Modulation Frequency ..... 1000 Hz

	<b>Measured</b> <b>at (MHz)</b>	<b>Unit</b>	<b>Nominal</b>	<b>Limit</b>

Sub Carrier Product Rejection	98.1	dB	37	30

## AUDIO SECTION

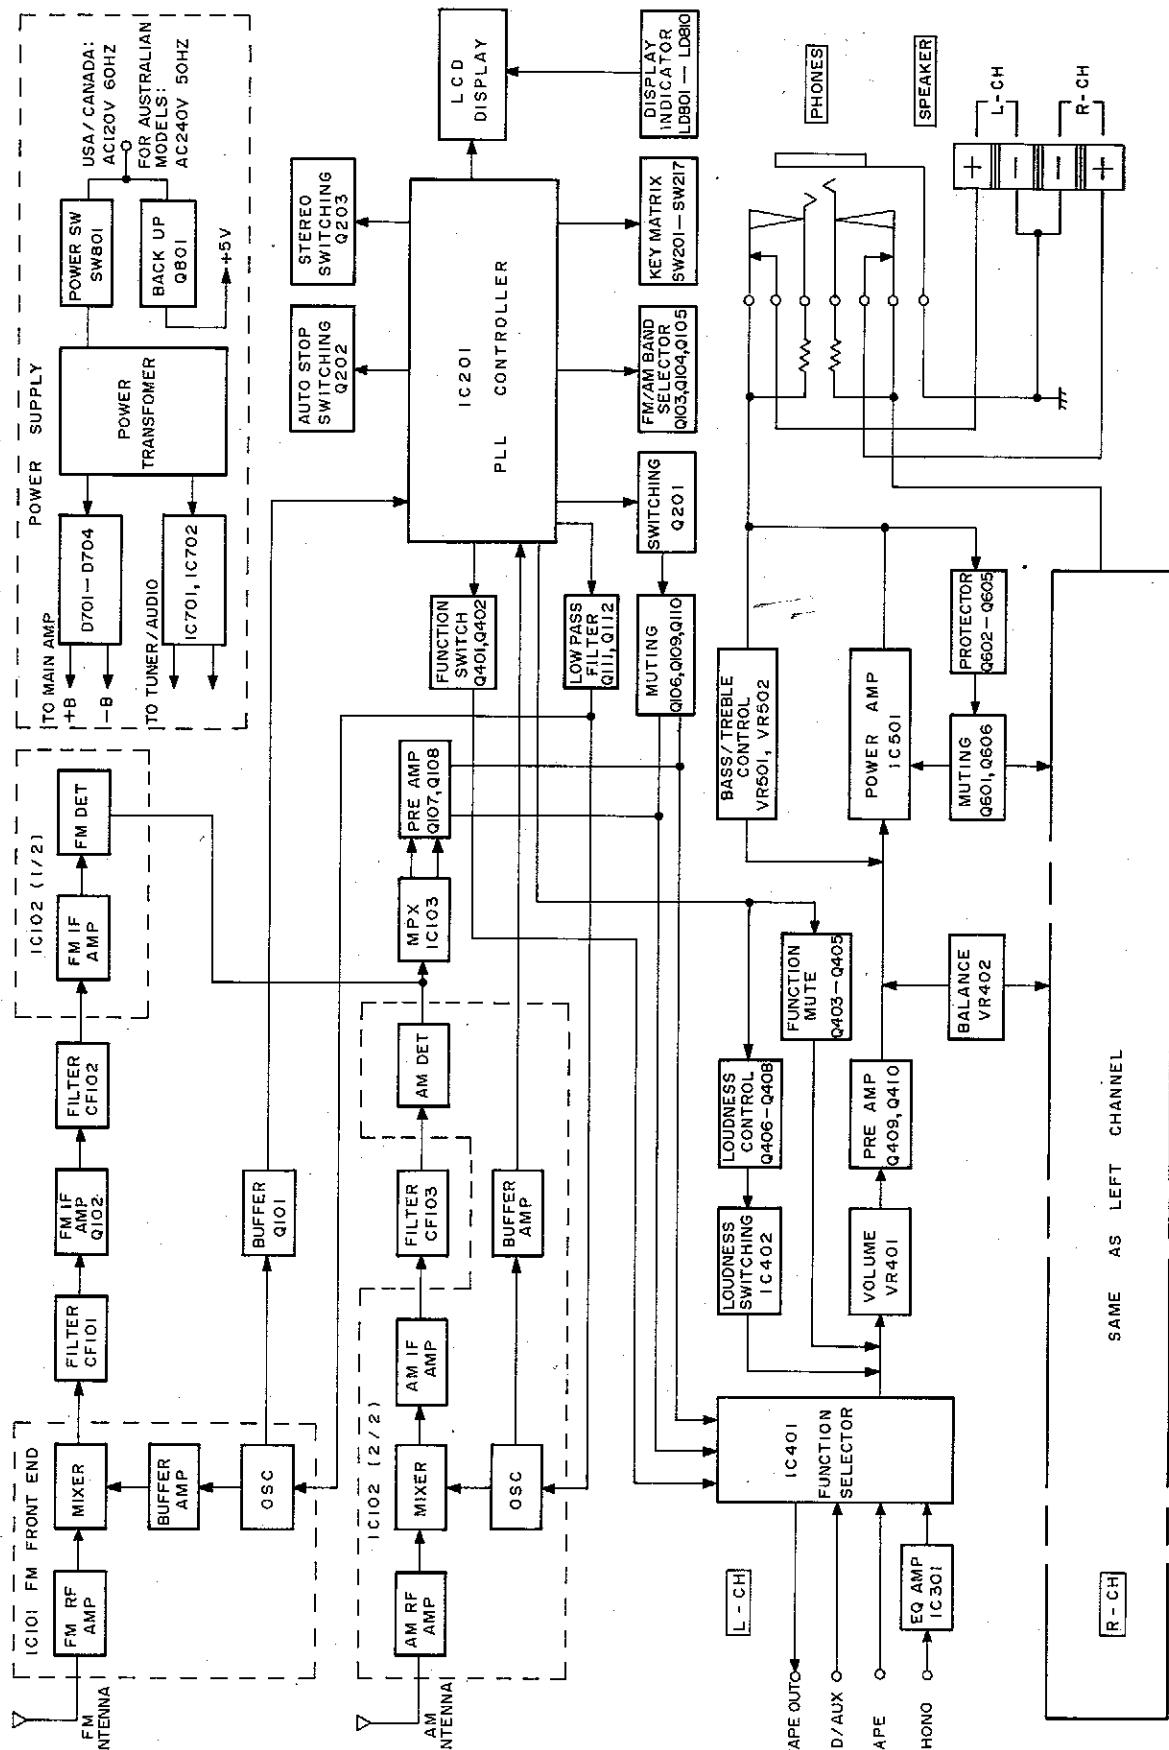

- All items are measured at speaker terminals with non-reactive rated load (8 ohms) unless otherwise indicated.
- Rated Power 13 W.
- Rated THD 0.5%.

		<b>Unit</b>	<b>Nominal</b>	<b>Limit</b>
Power Output from 40 Hz to 20 kHz under Rated THD both channels driven 8 ohms load.		W	15	13
Input Impedance at 1 kHz	PHONO TAPE CD/AUX	kohm	47	—
Sensitivity for Rated Power	PHONO TAPE CD/AUX	mV	2.5 150 150	$2.5 \pm 3.0$ dB $150 \pm 3.0$ dB $150 \pm 3.0$ dB

		Unit	Nominal	Limit
Total Harmonic Distortion at 1 kHz, Rated Power		%	0.08	0.5
Maximum Input Signal at 1% THD (measured at Tapeout)	PHONO	mV	80	60
Frequency Response at 0.5W power from 40 Hz to 20 kHz	CD/AUX	dB	0	± 3
S/N Ratio at IHF a Filter, Rated Power Reference				
PHONO (10 mV Input and Shorted)		dB	70	63
TAPE (Input Shorted)		dB	72	65
CD/AUX (Input Shorted)		dB	72	65
Loudness Control at -30 dB volume position	100 Hz 10 kHz	dB dB	+6 +4.5	+6 ± 3.0 +4.5 ± 3.0
Tone Control Response				
Bass Control Action	100 Hz	dB	± 10	± 10 ± 3.0
Treble Control Action	10 kHz	dB	± 10	± 10 ± 3.0
Crosstalk at TAPE	1 kHz	dB	52	45
Channel Balance at VR maximum		dB	0	3.0
Hum and Noise at VR min		mV	1.0	3.0
Phone Equalizer (RIAA) channel (measured at Tapeout)	100 Hz 10 kHz	dB dB	+12.9 -13.75	+12.9 ± 3 -13.75 ± 3
Radio Memory Backup Time		Hour	72	—

**Note:** Nominal specs represent the design specs. All units should be able to approximate these - some will exceed and some may drop slightly below these specs. Limit specs represent the absolute worst condition that still might be considered acceptable; in no case should a unit fail to meet limit specs.

# BLOCK DIAGRAM

## CIRCUIT DESCRIPTION

### DIGITAL TUNING SYSTEM DESCRIPTION

The STA-300 digital tuning system provides full electronic control of a vari-cap tuned FM/AM receiver. The block diagram of the system is shown in the figure. This is a phase-locked loop digital tuning system which consists of integrated circuit; controller plus PLL in a single chip, and built-in two-modulus prescaler. The controller chip (IC201) provides phase-locked loop capability with on-chip frequency divider, a reference oscillator whose frequency is controlled by an external crystal of 4.5 MHz, and phase comparator circuitry. It accepts directly an AM local oscillator signal and an FM signal from FM buffer (Q101) and outputs control signals for closed loop operation of these oscillators. The controller also provides the signals to drive the display. The frequency of the tuned station is displayed on a four digit multiplexed display. Six favorite stations on AM band and twelve favorite stations on FM band can be stored as well as "last station tuned" information.

#### Example of FM operation

When receiving 98.1 MHz, the VCO generates 108.8 MHz ( $98.1 + 10.7(\text{IF})$  MHz). The signal passes through buffer amp Q101, then is applied to pin 8 of PLL IC, IC201. This frequency is divided by N ( $N = (98.1 \text{ MHz} + 10.7 \text{ MHz}) \div (2 \times 25 \text{ kHz}) = 2176$ ); the resulting output is 25 kHz.

The reference oscillator 4.5 MHz is divided by 180 in IC201, resulting in another 25 kHz frequency.

These two 25 kHz signals are fed to the phase detector in IC201. An error voltage is generated by the phase detector, which is proportional to the phase difference between these two 25 kHz signals. This error voltage appears at pin 11 of IC201 and passes through the LPF where the error voltage is integrated, and harmonics and noise are filtered out. The resulting DC voltage is applied to the varicap diode D102 (part of VCO) whose capacity varies with applied DC voltage. Thus the output frequency of VCO is corrected. With proper circuit design and precise adjustments, the VCO frequency is accurate and precise when the system is "locked", meaning the phase detector senses no phase differences between the two 25 kHz signals and the frequency VCO generates which is as accurate and stable as the reference crystal oscillator.

#### Example of AM operation (The basic PLL circuitry system is same as in FM mode.)

When receiving 1000 kHz, VCO generates a 1450 kHz signal ( $1000 + 450 (\text{IF})$  kHz). The AM VCO output signal, 1450 kHz is applied to pin 9 of PLL, IC201. This frequency is divided by N (=145). The resulting output will be 10 kHz.

The reference oscillator 4.5 MHz, is divided by 450, resulting in another 10 kHz frequency.

These two 10 kHz signals are fed to the phase detector. An error voltage is generated by the phase detector, which is in proportion to the phase difference between these two 10 kHz signals. This error voltage appears at pin 11 of IC201 and passes through the LPF where the error voltage is integrated, and harmonics and noise are filtered out.

The resulting DC voltage is applied to the varicap diode D104 (part of VCO) whose capacity varies with applied DC voltage. Thus the output frequency of VCO is corrected. With proper circuit design and precise adjustments, the VCO frequency is accurate and precise.

When the system is "locked", the phase detector senses no phase differences and generates a frequency which is as accurate and stable as the reference crystal oscillator.

**Notes:**

- The values of divider N can be calculated as follows:

FM band: VCO frequency =  $f(\text{reference}) \times 2N$

$$N = \text{VCO frequency} (= \text{receiving frequency} + 10.7 \text{ MHz}) \div f(\text{reference}, 25 \text{ kHz}) \times 2$$

Receiving frequency (MHz)	87.5 – 107.9
VCO frequency (MHz)	98.2 – 118.6
N	1964 – 2372

AM band:  $N = \text{VCO frequency} (= \text{receiving frequency} + 450 \text{ kHz}) \div f(\text{reference})$

Tuning range (kHz)	520 – 1720
f (Reference) (kHz)	10
N	97 – 217

- Reference oscillator 4.5 MHz is divided by divider of IC201.

FM band:  $180 = 4.5 \text{ MHz} \div 25 \text{ kHz}$

AM band:  $450 = 4.5 \text{ MHz} \div 10 \text{ kHz}$

- LPF circuitry applies the DC voltage to VCO circuitry which is converted from the output signal (25 kHz for FM, 10 kHz for AM) of phase detector (internally IC201).

TAPE	1	0																
CD/AUX	1	1																
32	PC0	Loudness	This output line is high to activate the loudness circuit.															

# **CONTROL KEY AND SWITCH MATRIX**

**Figure 3**

## Searching for Stations

#### **SEARCH Switch; ON (SEEK)**

When the "SEARCH" indicator is indicated on the LCD, pressing the UP or DOWN key for a moment causes automatic up or down. Searching at the speed at 30-50 ms/ch until SD terminal activates (active low) or UP or DOWN key is pressed.

## **SEARCH Switch; OFF (Manual Searching)**

Pressing the UP or DOWN key starts tuning to the next channel, and pressing the key continuously for more than 0.5 second allows traversing up or down at the speed of 100 ms until the key is released.

## Memory Tuning

## **MEMORY**

The tuning information is stored into an internal RAM by pressing the MEMORY key and then the desired memory tuning key within 5 seconds. If no key is pressed during this 5 seconds, the MEMORY function is cancelled.

M1 to M6

Six AM, twelve FM favorite stations can be recalled from internal RAM for each band. When it is switched from one band to the other band, it tunes to the "last-tuned-to station" on that band. Each time a station is changed, the controller provides a signal to mute the tuner.

## **AUTO STOP CIRCUIT FOR AUTO SEARCH**

The automatic stop circuit consists of IC102 and IC201. When receiving input signal of more than 15  $\mu$ V in FM or more than 500  $\mu$ V in AM, pin 8 of IC102 goes low and Q202 turns on. Then pin 24 and pin 19 of IC201 are connected to each other. So the auto search stops on the station of the signal.

Adjust the auto-stop level by VR101(FM).

## **FUNCTION MUTE CIRCUIT**

To eliminate the clicking noise when the function selector is changed from one function to another, the function mute circuit is activated.

When the function selector is pressed, a high signal is applied to pin 17 of IC201. Then pin 17 goes low and Q201 turns on, and Q403, Q404 and Q405 turn on. This mutes an input into the main amp circuit to eliminate the clicking noise.

## **THERMAL PROTECTION CIRCUIT**

The STA-300 uses a transistor as thermal protector. If the temperature of the power transformer rises to 105°F, Q605 turns on. This causes Q602, Q603, Q604 to turn on and Q601 to turn off so that the signals are shut down.

# ALIGNMENT

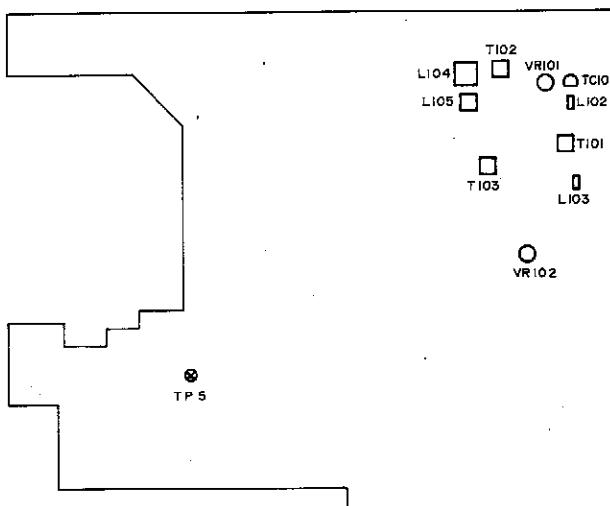

Figure 4. Alignment Locations

## AM Section

### List of Test Equipment

- AM standard signal generator (AM SG)
- AC voltmeter (SSVM)
- Oscilloscope
- DC voltmeter
- Distortion meter

### General Preparation

- Connect standard loop antenna to AM standard signal generator (400 Hz, 30% modulation) and radiate signal into AM loop antenna.
- Connect oscilloscope, distortion meter and SSVM to TAPE OUT jack.
- Press in AM selector switch.
- Rotate VOLUME to minimum.
- Set TONE and BALANCE controls to center position.

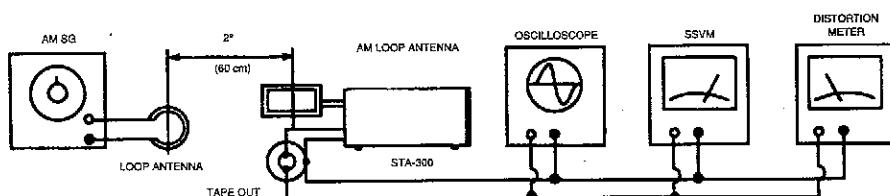

Figure 5

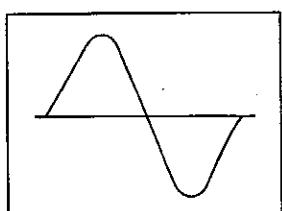

Figure 6

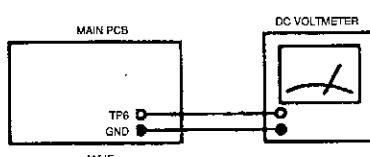

Figure 7

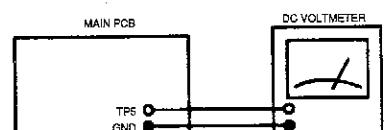

Figure 8

No.	Alignment	Connection	Step	Gen. Freq.	Indicator	Adjustment	For
1	IF	Fig. 5	--	450 kHz (400 Hz, 30% modulation)	Oscillo-scope	T102	Maximum symmetrical waveform in Fig. 2.
2	Coverage	Fig. 5	--	Check the coverage from 520 - 1720 kHz. (from 531 - 1710 kHz for Australia.)			
3	Tracking	Figs. 5 and 7	a	600 kHz (603 kHz)	DC voltmeter	L105	2.05 V ± 0.2 V
					AC voltmeter	L104	Maximum reading
			b	1400 kHz (1404 kHz)	DC voltmeter	TC102	6.5 V ± 0.5 V
					AC voltmeter		Maximum reading
4	Tracking Error	Fig. 5	a	1000 kHz (999 kHz)	AC voltmeter	Check for tracking error at 1000 kHz. It should be within 2 dB.	
			b	If tracking error does not fall within 2 dB, change 3-b voltage (6.5 V) by 4.6 V, and repeat 3-a and 3-b. Then check the voltage of 3-b -- should be within 9.0 V.			
5	Auto-Stop	Figs. 5 and 8	a	1000 kHz (999 kHz) 500 µV input	DC voltmeter	Check TP5.	0 V reading
			b	With 500 µV +9.5 -6.0 dB input, check if auto-stop activates.			

\* Frequencies inside of the parentheses are for Australian models.

## FM Section

### List of Test Equipment

- FM standard signal generator
- AC voltmeter (SSVM)
- Oscilloscope
- DC voltmeter
- Distortion meter
- Dummy antenna 300 ohm

### General Preparation

- Connect FM standard SG (1000 Hz, 75 kHz deviation) to FM 300 ohm antenna terminal. Connect oscilloscope, distortion meter and SSVM to TAPE OUT jack.
- Press in FM selector switch.
- Rotate VOLUME to minimum.

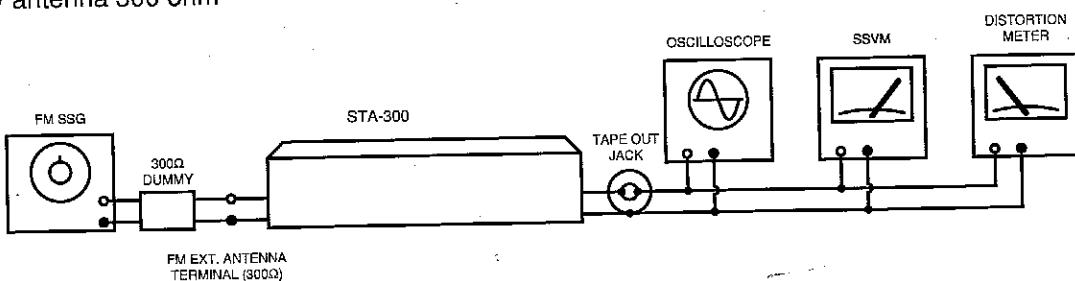

Figure 9

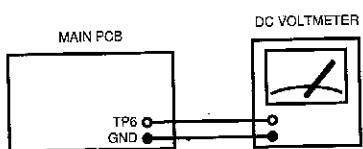

Figure 10

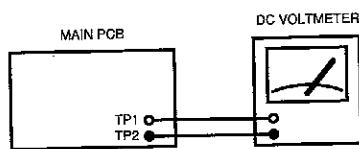

Figure 11

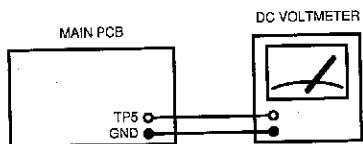

Figure 12

No.	Alignment	Connection	Step	Gen. Freq.	Indicator	Adjustment	For
1	Coverage	Fig. 10	a	87.5 MHz	DC volt-meter	L103	$2.4 \text{ V} \pm 0.3 \text{ V}$
			b	107.9 MHz (108 MHz)	DC volt-meter	Check	$7.5 \text{ V} \pm 1 \text{ V}$
2	IF	Figs. 9 and 11	a	98.1 MHz No input	DC volt-meter	T103	$0 \text{ V} \pm 30 \text{ mV}$
			b	98.1 MHz 1 mV input	AC volt-meter	T101	Maximum reading
3	Tracking	Fig. 9	a	89.9 MHz	AC volt-meter	L102	Maximum reading
			b	105.9 MHz	AC volt-meter	TC101	Maximum reading
			c	Repeat Steps a and b until no further improvement can be made.			
4	Auto-Stop	Figs. 9 and 12	a	98.1 MHz 1 mV input	DC volt-meter	VR101	$0 \text{ V reading at } 98.1 \text{ MHz } (\pm 27 \text{ kHz} - \pm 50 \text{ kHz})$
			b	Check if auto stop activates with $14.1 \mu\text{V} \pm 6 \text{ dB}$ input.			

\* Frequencies inside the parentheses are for Australian models.

## FM MPX Section

### List of Test Equipment

- FM stereo SG  
Modulation level of 19 kHz  
Pilot signal ....8%
- FM Signal generator  
Output level .. 1 mV  
Frequency ....Approximately 98.1 MHz  
Deviation .....67.5 kHz, 90%
- AC voltmeter (SSVM)
- Oscilloscope
- Distortion meter
- Frequency counter

### General Preparation

- Connect FM stereo SG (1000 Hz, 67.5 kHz deviation, 7% Pilot) through FM standard SG to 300 ohm antenna terminal.
- Connect oscilloscope, distortion meter and SSVM to TAPE OUT jack.
- Press in FM selection switch.
- Press out MONO switch (stereo position).
- Rotate VOLUME to minimum.

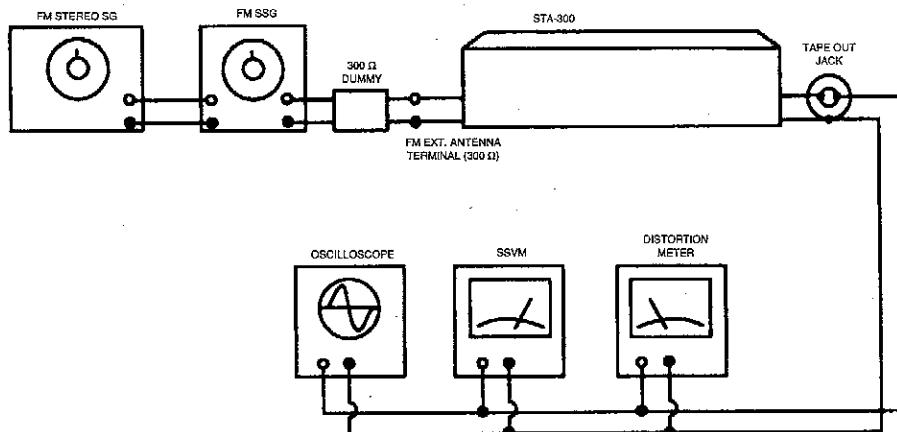

Figure 13

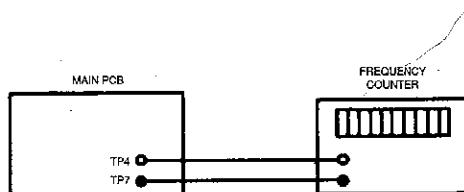

Figure 14

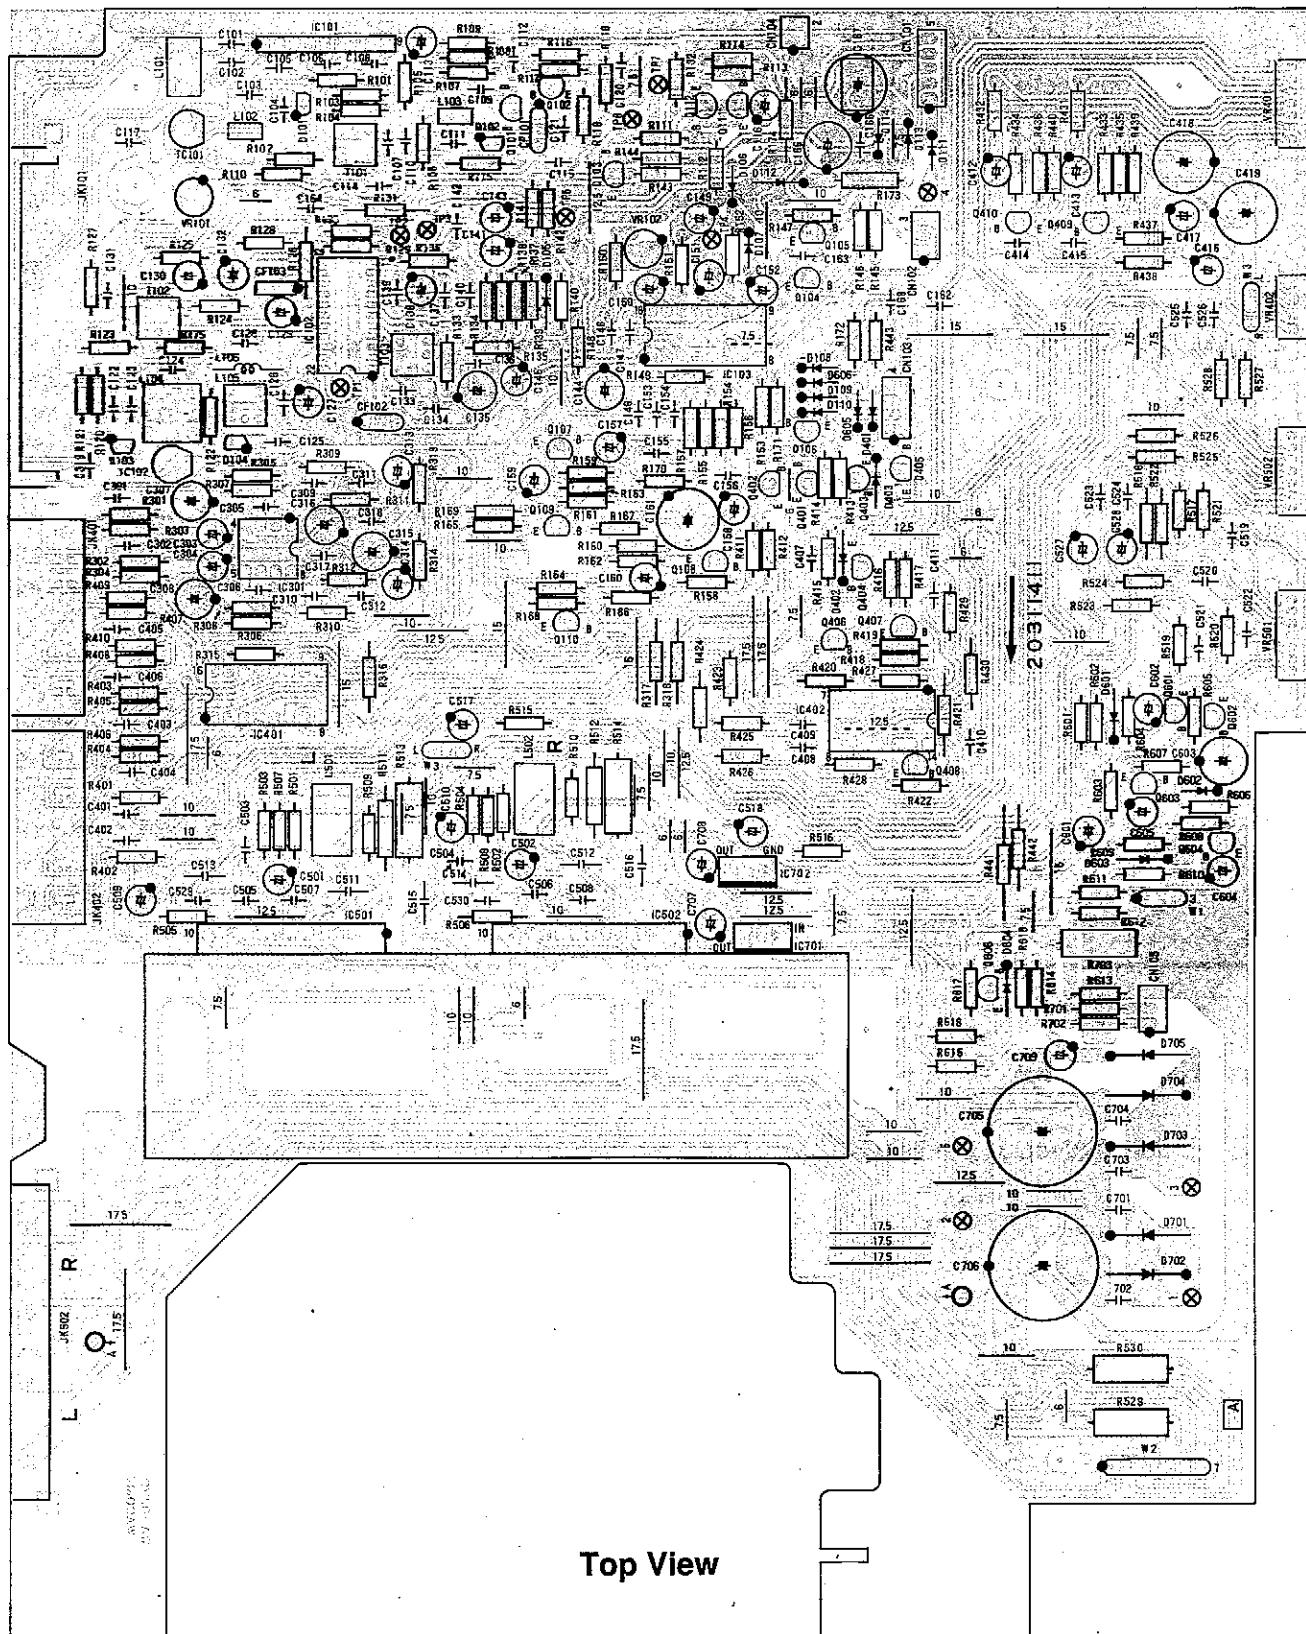

No.	Alignment	Connection	Step	Stereo Mod.	Indicator	Adjustment	For
1	MPX	Fig. 13	a	Set FM SG to MONO mode. Input 1 mV at 98.1 MHz, then cut the deviation.			
			b	MONO 1 kHz (1000 Hz, No Mod) 1 mV input	Frequency counter	VR102	19 kHz $\pm$ 50 Hz
2	Stereo LCD	Fig. 13	--	Composite MPX signal 1 kHz.	STEREO indicator		With 14.1 $\mu$ V $\pm$ 6 dB, STEREO LCD should light.
3	Separation	Fig. 13	a	Composite MPX signal 1 kHz on LEFT channel only.	AC voltmeter	Check	Minimum reading at RIGHT channel output.
			b	Composite MPX signal 1 kHz on RIGHT channel only.	AC voltmeter	Check	Minimum reading at LEFT channel output.
			c	Repeat Steps a and b until AC voltmeter reading is at least - 25 dB (i.e. 25 dB separation).			
4	Distortion	Fig. 13	--	Composite MPX signal 1 kHz.	Distortion meter	With 1 mV antenna input, stereo distortion should be less than 2%.	

### Memory Back Up Check

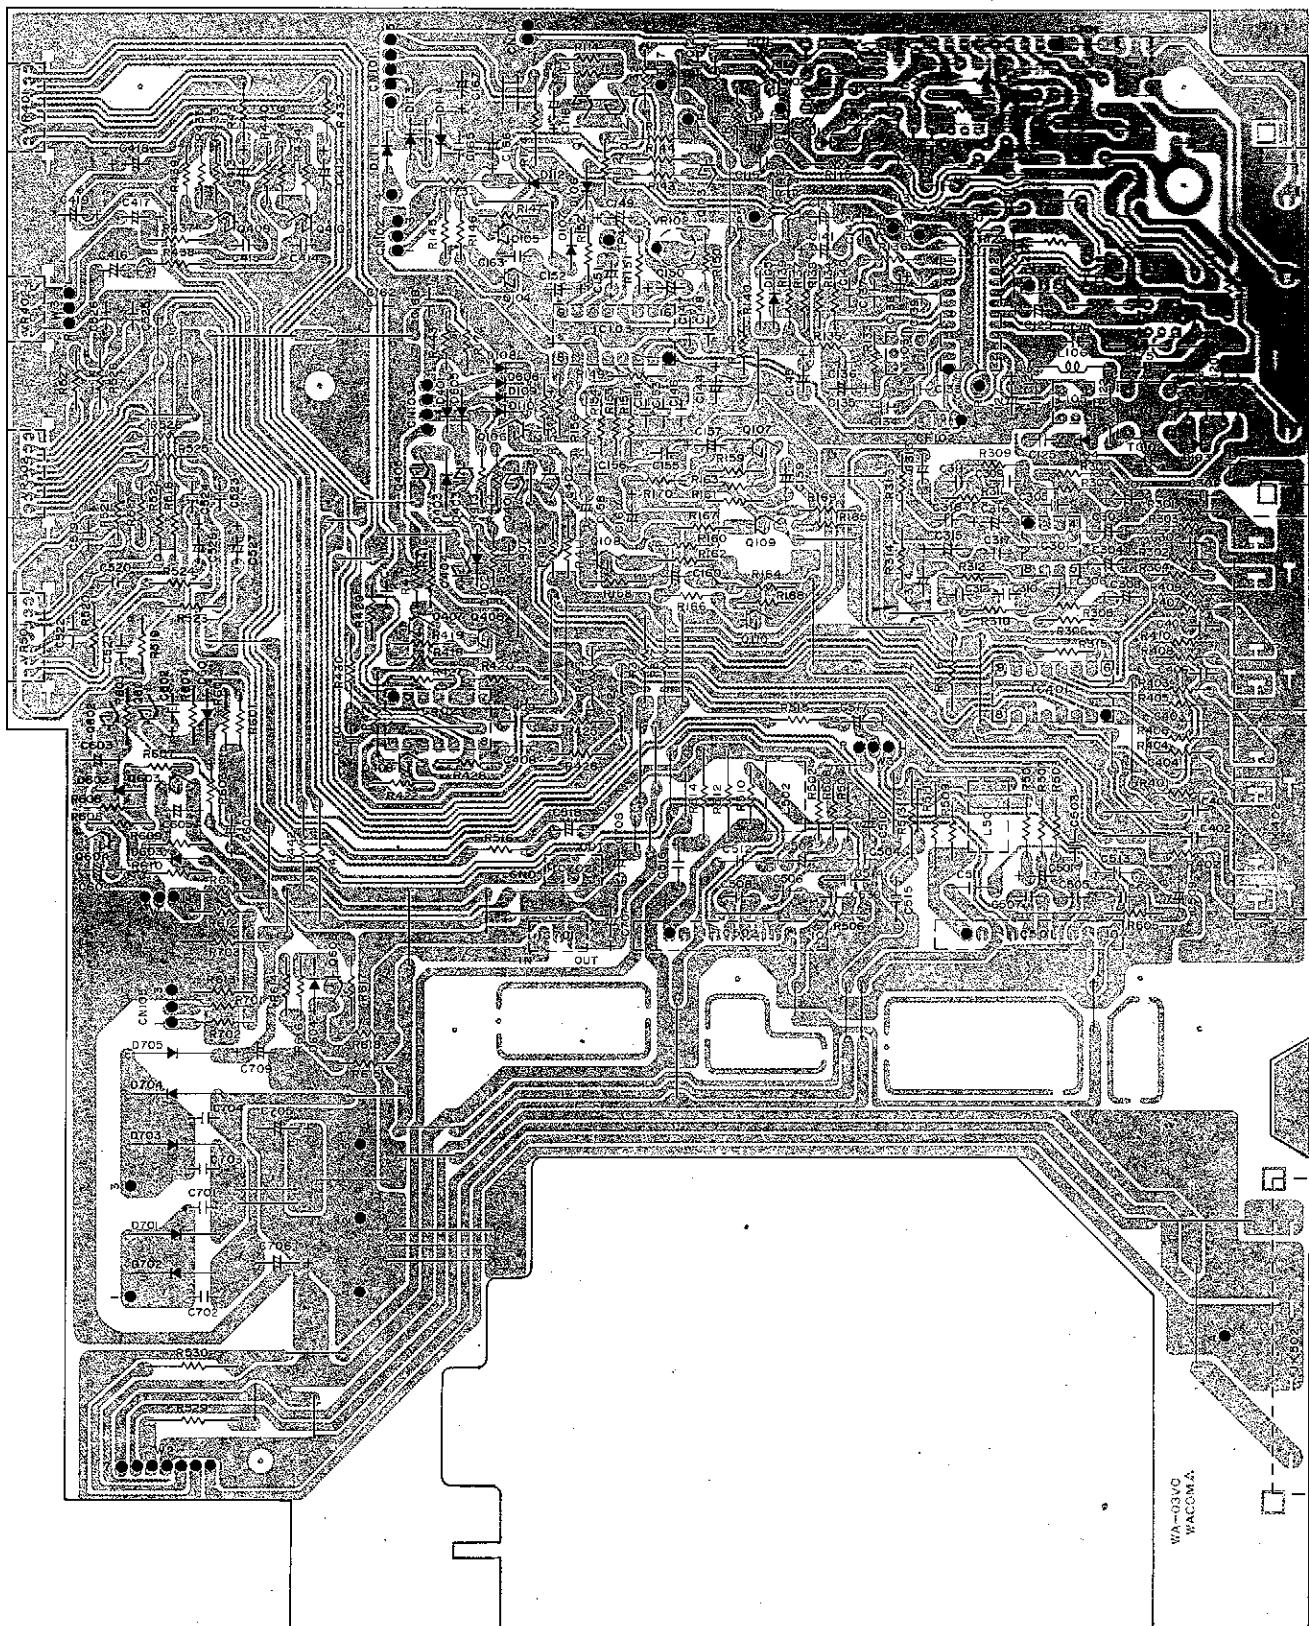

Unplug AC Cord and replug it after 10 minutes. Check that memorized frequencies are held.

One channel does not work with volume (VR401) at maximum with a test signal applied to the center terminal of the volume of the dead channel.	<ul style="list-style-type: none"> <li>• Defective IC501, IC502, Q409 or Q410 in main amp circuit.</li> <li>• Short in speaker output terminal.</li> <li>• Defective capacitors: C412, C413, C416, C417, C501 or C502.</li> <li>• Defective IC201, IC401, Q401 or Q402.</li> </ul>	<ul style="list-style-type: none"> <li>• Replace defective component(s).</li> <li>• Repair.</li> <li>• Replace defective capacitor(s).</li> <li>• Replace defective component(s).</li> </ul>
Speaker works normally but headphones inoperative.	<ul style="list-style-type: none"> <li>• Headphone plug does not mate with jack.</li> <li>• Defective R529 or R530.</li> <li>• Poor contact in TAPE, CD/AUX input jack.</li> <li>• Defective IC201, IC401, Q401, Q402, SW215 or SW216.</li> </ul>	<ul style="list-style-type: none"> <li>• Replace the plug.</li> <li>• Replace.</li> <li>• Repair or replace the jack..</li> <li>• Replace defective component(s).</li> </ul>
PHONO input inoperative.	<ul style="list-style-type: none"> <li>• Poor contact in PHONO input jack.</li> <li>• Defective IC201, IC401, IC301, Q401, Q402 or SW214.</li> </ul>	<ul style="list-style-type: none"> <li>• Repair or replace the jack.</li> <li>• Replace defective component(s).</li> </ul>
TAPE OUT has no effect.	<ul style="list-style-type: none"> <li>• Defective contact in TAPE OUT jack.</li> <li>• Defective R401 or R402.</li> </ul>	<ul style="list-style-type: none"> <li>• Repair or replace the jack.</li> <li>• Replace.</li> </ul>

Symptom	Cause	Remedy
FM inoperative	<ul style="list-style-type: none"> <li>• Defective L101.</li> <li>• Defective IC201, IC401, Q401, Q402 or SW213.</li> <li>• Defective Q101, Q102, Q103, Q104, Q105, Q111, Q112, IC101, IC102 or IC103.</li> <li>• Defective coil(s): L102, L103, T101 or T103.</li> <li>• Defective ceramic filter(s): CF101, CF102.</li> <li>• Defective IC201, IC401, Q401 or Q402.</li> </ul>	<ul style="list-style-type: none"> <li>• Replace.</li> <li>• Replace defective component(s).</li> <li>• Replace defective component(s).</li> <li>• Replace defective coil(s).</li> <li>• Replace defective ceramic filter(s).</li> <li>• Replace defective component(s).</li> </ul>
Poor multiplex separation.	<ul style="list-style-type: none"> <li>• Defective R153.</li> </ul>	<ul style="list-style-type: none"> <li>• Replace.</li> </ul>
STEREO indicator does not light.	<ul style="list-style-type: none"> <li>• Improper adjustment of VR102.</li> <li>• Defective LCD.</li> <li>• Defective IC201.</li> </ul>	<ul style="list-style-type: none"> <li>• Re-adjust VR102.</li> <li>• Replace.</li> <li>• Replace.</li> </ul>
AM inoperative.	<ul style="list-style-type: none"> <li>• Damaged IC102, IC103.</li> <li>• Defective L104, L105 or T102.</li> <li>• Defective R122, R129 or R140.</li> <li>• Defective C143.</li> <li>• Defective SW212.</li> <li>• Defective varicap diode(s): D103, D104.</li> <li>• Damaged AM loop antenna.</li> <li>• Defective IC201, IC401, Q401 or Q402.</li> </ul>	<ul style="list-style-type: none"> <li>• Replace.</li> <li>• Replace defective component(s).</li> <li>• Replace defective component(s).</li> <li>• Replace.</li> <li>• Relace.</li> <li>• Replace.</li> <li>• Repair or replace.</li> <li>• Replace defective component(s).</li> </ul>
LOUDNESS has no effect.	<ul style="list-style-type: none"> <li>• Defective IC201, IC402 or SW217.</li> <li>• Defective Q406, Q407 or Q408.</li> <li>• Defective C408-C411, R425-R430.</li> </ul>	<ul style="list-style-type: none"> <li>• Replace defective component(s).</li> <li>• Replace defective transistor(s).</li> <li>• Replace defective component(s).</li> </ul>
BASS control has no effect.	<ul style="list-style-type: none"> <li>• Defective VR501.</li> <li>• Defective C519-C522, R517-R522.</li> </ul>	<ul style="list-style-type: none"> <li>• Replace.</li> <li>• Replace defective component(s).</li> </ul>
TREBLE control has no effect.	<ul style="list-style-type: none"> <li>• Defective VR502.</li> <li>• Defective C523-C526, R525-R528.</li> </ul>	<ul style="list-style-type: none"> <li>• Replace.</li> <li>• Replace defective component(s).</li> </ul>

Symptom	Cause	Remedy
Excessive noise of PHONO input.	<ul style="list-style-type: none"> <li>Defective IC301.</li> <li>Defective R307, R308, C307 or C308.</li> </ul>	<ul style="list-style-type: none"> <li>Replace.</li> <li>Replace.</li> </ul>
Noisy VOLUME control.	<ul style="list-style-type: none"> <li>Defective VR401.</li> <li>Defective C412, C413, C501 or C502.</li> </ul>	<ul style="list-style-type: none"> <li>Replace.</li> <li>Replace defective capacitor(s).</li> </ul>
SEARCH tune inoperative (UP/DOWN, AM or FM).	<ul style="list-style-type: none"> <li>Poor contact in UP/DOWN key.</li> <li>Defective SW209.</li> <li>Defective IC201.</li> <li>Defective D205.</li> <li>Defective IC101, IC102 or IC201.</li> <li>In case of FM only, improper adjustment of T101, T103.</li> </ul>	<ul style="list-style-type: none"> <li>Repair or replace.</li> <li>Replace.</li> <li>Replace.</li> <li>Replace</li> <li>Replace defective IC(s).</li> <li>Re-adjust.</li> </ul>
MANUAL tune inoperative (UP/DOWN, AM or FM).	<ul style="list-style-type: none"> <li>Poor contact in UP/DOWN key.</li> <li>Defective IC201.</li> </ul>	<ul style="list-style-type: none"> <li>Repair or replace.</li> <li>Replace.</li> </ul>
MEMORY setting (Keys M1-M6) inoperative.	<ul style="list-style-type: none"> <li>Poor contact in memory keys M1-M6.</li> <li>Poor contact in MEMORY set key.</li> <li>Defective IC201.</li> <li>Defective D204, D205.</li> </ul>	<ul style="list-style-type: none"> <li>Replace the key(s).</li> <li>Replace the key.</li> <li>Replace.</li> <li>Replace.</li> </ul>
LCD inoperative.	<ul style="list-style-type: none"> <li>Defective LCD.</li> <li>Defective IC201.</li> </ul>	<ul style="list-style-type: none"> <li>Replace.</li> <li>Replace.</li> </ul>

## ELECTRICAL PARTS LIST

**PRODUCT SAFETY NOTE:** Products marked with a  have special characteristics important to safety. Before replacing any of these components, read carefully the products safety notice of this service manual. Don't degrade the safety of the product through improper servicing.

Ref. No.	Description				RS Part No.	Mfr's Part No.
	PCB Assembly, Main consists of the following:				US CA AU	MH00658 MH00719 MH00838
<b>CAPACITORS</b>

# EXPLODED VIEW / DISASSEMBLY INS

# ASSEMBLY INSTRUCTIONS

## Disassembly Instructions:

1. Remove seven screws S4 from the top cabinet assembly 20, then slide off the top cabinet.
2. To remove main PCB assembly 13:
  - 1) Remove a knob 1 and its nut and three knobs 2 from the front panel assembly 3.
  - 2) Remove three screws S1, which secure the power switch holder 15, from the side of the chassis.
  - 3) Remove five screws S4 from the back panel 30.
  - 4) Remove three screws S4 from the main PCB assembly 13.
3. To remove the display PCB 31 from the front panel assembly 3, remove nine screws S5.
